(54) Title: ROTATABLE WINDOW PANE ASSEMBLY AND METHOD OF REPOSITIONING

(57) Abstract: A rotatable window pane assembly and method of repositioning the same is disclosed in which the window pane assembly comprising a frame and at least one window pane is rotatably supported in a fixed frame from a first position, such that the at least one window pane is parallel to an aperture defined by the fixed frame, to a second position, such that the at least one window pane is parallel to the aperture defined by the frame and a second surface of the at least one window pane faces the outside, or from a second to first position. A seal assembly comprising a seal frame and at least one pliable seal carried is located on the inside with respect to the fixed frame and is pivotally displaceable independently of the position of the window pane assembly, from a closed position in which the seal frame is parallel and adjacent to the aperture defined by the interior surface of the fixed frame to an open position in which the seal frame is spaced from and at an angle to the aperture.
